José Ángel Ceballos Rodríguez

SYSTEMS ENGINEER

ABOUT ME

I am a person committed to my work and to those tasks that need to be done within my competencies. I have studied the scientific baccalaureate, achieving a good average in selectivity. I want to undertake and learn in this world that I like so much.

ACADEMIC HISTORY

University Pablo de Olavide 2022-2027

Certificated of Engineering in Information System

- GPA: 6.05

AWARDS AND CERTIFICATION

Risk Management and Mitigation | 2023

Academy of Internal Auditors

- Contributed to organizational resilience and stability

Project Management | 2023

The Project Management Institute

- Improved project success rates and efficiency

INTERESTS AND HARDWARE LAB

Potensic drone operator (interest in RF, telemetry and 3D printing of parts). Active practice in RFID/NFC, security physics). Software customization/ retro console hardware, as well as the modification and management of their internal circuits and components

PROFESSIONAL SUMMARY

Detail-oriented Systems Design Professional with extensive experience developing and implementing end-to-end system architectures. Expert in system analysis, meticulous requirement gathering, and creating comprehensive technical documentation that bridges the gap between stakeholders and development teams. Adept at working within agile environments and cross-functional teams to deliver high-quality, future-proof software/hardware systems on time.

WORK EXPERIENCE

Web application for authentication and digital signing of documents (Viafirma Platform)

Java EE · SOA Architecture · NetBeans · Maven · Tomcat

- Development of an authentication web application using a digital certificate and electronic signature of documents on the Viafirma platform.
- Implementation of signing PDF documents in PAdES format and XML files in XAdES format.
- Worked with X.509 certificates (including handling self-signed certificates) and validating their status using CRL and OCSP.
- Development of a signature module on the server with immediate validation and integration of QR codes as graphic proof of signature using the iText library

JFull-Stack Developer | Python & Django | System Architecture

Project: UrbanField | Enterprise Management & API Ecosystem

- Architecture & Design: Engineered a robust MVT (Model-View-Template) architecture, implementing Soft Delete patterns and custom Managers to handle data lifecycle. Decoupled logic through custom Middleware and utility services.
- Data Persistence & Infrastructure: Architected high-availability PostgreSQL backends with Docker-based containerization. Managed environment security via .env isolation and implemented complex relational mapping with indexing for query optimization.
- API & Interoperability: Developed RESTful endpoints using Django REST Framework (DRF). Integrated third-party services (Open-Meteo API) using asynchronous/robust requests session handling with error-boundary patterns.
- UX & Reactive Logic: Implemented dynamic filtering using Q-objects and paginated, responsive UI components. Enhanced system state management and user authentication (1:1 profiles, custom security decorators) to ensure data integrity.
- Deployment & Best Practices: Streamlined development workflows with automated database migrations, Gunicorn-based production servers, and strict adherence to PEP 8 standards using automated formatting tools.

SKILLS

- Technical Skills: System Architecture Design, Software Development, Database Management, Cloud Computing
- Soft Skills: Effective Communicator, Flexible, Agile, Smooth Collaborator
- Lenguages: Java, Java EE (JSP, Servlets), C, SQL, HTML, JavaScript, PHP, Python, .NET
