PROFILE

I am an Information Systems Engineering student at Pablo de Olavide University with hands-on experience in backend development and security.

My projects include an electronic signature application using X.509 certificates (PAdES, XAdES, OCSP/CRL validation) and a full web platform built with Django, PostgreSQL and Docker, the latter developed for learning purposes. I am interested in cybersecurity and systems architecture.

I am looking for an internship or first job where I can learn fast, work as part of a team and contribute from day one.

EXPERIENCE & PROJECTS

Developer · Digital Document Signing Application

Pablo de Olavide University · Seville · February 2025 – June 2025 · Repository
Java EE, SOA architecture, Maven, Tomcat, iText, Viafirma platform

- Developed a web application for digital-certificate authentication and electronic document signing on the Viafirma platform.
- Implemented PDF signing in PAdES format and XML signing in XAdES format, following European advanced e-signature standards.
- Managed X.509 certificates, including self-signed ones, and validated their status in real time via CRL and OCSP.
- Built a server-side signing module with instant validation and a QR stamp as verifiable visual proof of signature.

Full-Stack Developer · UrbanField, Urban Sports Facility Booking Platform

Personal project · October 2025 – March 2026 · Repository
Python, Django, Django REST Framework, PostgreSQL, Docker, Gunicorn

- Designed an MVT architecture with soft delete, custom model managers and middleware to decouple business logic.
- Developed a RESTful API with Django REST Framework and integrated the Open-Meteo API with error handling and asynchronous requests.
- Modelled a PostgreSQL database with complex relationships and indexes for query optimisation, deployed in Docker containers.
- Implemented authentication and permissions with user profiles and custom security decorators; sensitive config isolated in environment variables.
- Prepared deployment with Gunicorn, automated migrations and PEP 8-compliant code with automatic formatting.

EDUCATION

BSc in Information Systems Engineering · Pablo de Olavide University, Seville · 2022 – 2027 (in progress)

Project Management Course (PMI fundamentals) · Project Management Institute · 2023

Risk Management and Mitigation Course · Academia de Auditores Internos · 2023

TECHNICAL SKILLS

- **Languages (advanced):** Java (Java EE, JSP, Servlets), Python, SQL
- **Languages (intermediate):** JavaScript, HTML, C, PHP, C# (.NET)
- **Frameworks & backend:** Django, Django REST Framework, REST APIs, SOA architecture
- **Databases:** PostgreSQL, relational design, indexing and query optimisation
- **Tools & deployment:** Git, GitHub, Docker, Maven, Tomcat, Gunicorn
- **Security:** X.509 certificates, PAdES/XAdES e-signatures, OCSP/CRL validation, RFID/NFC
- **Methodologies:** Agile (Scrum), project management, requirements analysis and technical documentation

LANGUAGES

Spanish: native · **English:** B2 (Upper-Intermediate), technical documentation and professional communication

INTERESTS & HARDWARE LAB

- **Physical security and RFID/NFC:** hands-on testing with cards and readers.
- **Drones:** flying Potensic drones, RF telemetry and 3D printing of parts.
- **Retro electronics:** modding game consoles, their internal circuits and software.
